

EVENT MANAGEMENT SYSTEM

By D Yogendra Rao & Ankit Kumar

Overview

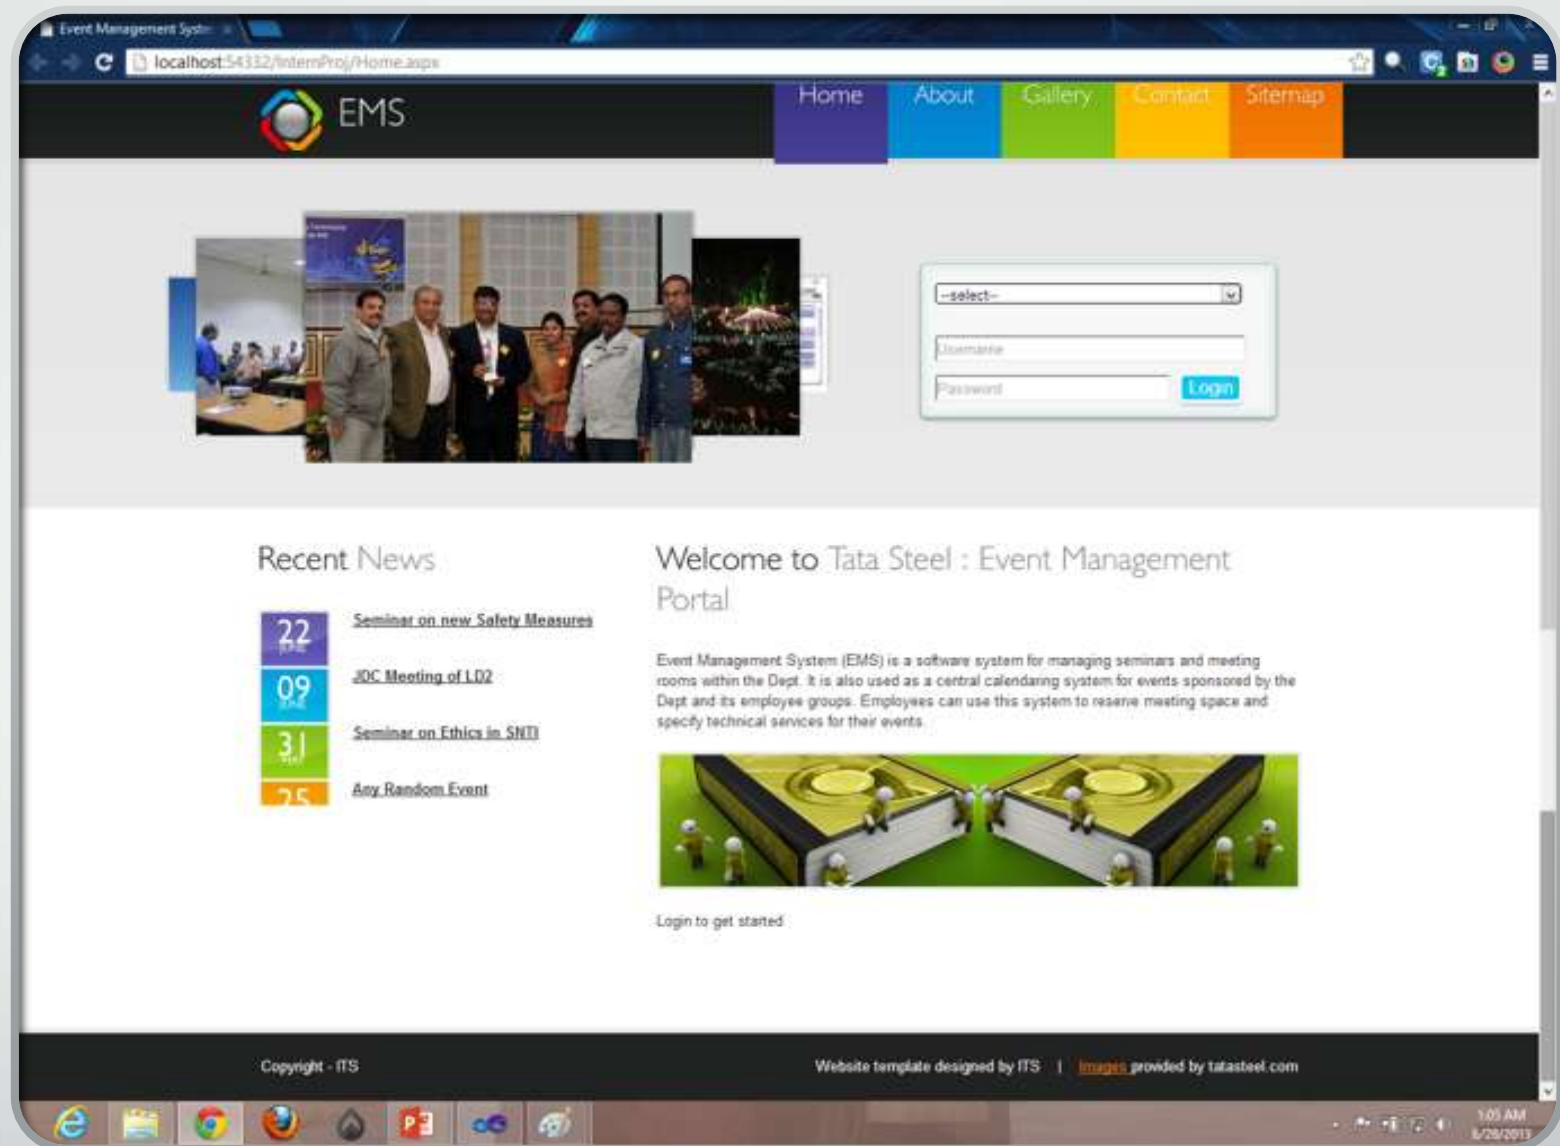

This project is aimed at developing an online application for the Tata Steel to help users manage various events throughout the year. Event Management System (EMS) is a software system for managing seminars and meeting rooms within the Departments. It is also used as a central calendaring system for events sponsored by the Department and its employee groups. Employees can use this system to reserve meeting space and specify technical services for their events. The system is an online application that can be accessed throughout the organization and outside as well with proper login provided.
